

Astronomy Seminar

Group 1: Observation

Ionut-Rares Pavel – ESPACE M.Sc.

Simone Gaisbauer – GuG M.Sc.

Isabel Hölzl – GuG M.Sc.

Antonia Bieringer – GuG M.Sc.

Outlook

Scope

Observation Principle

Equipment

Calibration

Measurements

1. Scope

- Despite progress, there still is a lack of policy regarding debris removal [1];
- Current models do not agree quantitatively [2];
- But all conclude that space operations will become hampered in the next decades;
- The debris population in near-Earth space - extensively studied during the last decade [2];
 - Information on objects > 2000km is still sparse;
 - Best detected by optical telescopes;
 - Many similarities with NEO observations.

2.1 Observation Principle [3]

Radar – limited to low-orbiting objects; area > signal wavelength;

LADAR – Laser Radar – point clouds from 3D scans;

Light curves - time-varying brightness measurements that result when sunlight reflects off the surfaces of a moving space object and reaches an observer;

- Used for stars, asteroids, and now space debris.
- Time intervals depend on the object's movement.

2.2 Light Curves

Light curve of a supernova [4].

Light curve of a binary star system [4].

2.2 Light Curves

- Optical surveys provide statistical information [5]:
 - rough characterization of the orbits, information on the magnitudes of the objects.
- Magnitudes \longrightarrow physical sizes: knowledge of surface properties shapes [5];
 - analysis of properties: observations of individual objects with large aperture, small FoV telescopes;
 - Tracking of individual objects: precise ephemerides (catalogue of precise orbits).
- Most objects have brightness variations with frequencies of [mHz] up to [dHz], corresponding to tumbling or rotation rates of the order of a tenth to many rotations per minute [5].

2.3 Mathematical Models [3]

Shape modelling

SO with i facets; facet with area A_i . Relative orientation of facet to body (B) is given by:

$$\mathbf{u}_{u(i)}^B \times \mathbf{u}_{v(i)}^B = \mathbf{u}_{n(i)}^B$$

Relative orientation of the Body (B) and Inertial (I) frames is described by the A_{true} matrix:

$$\mathbf{v}^B = A_{true} \mathbf{v}^I$$

The estimated attitude matrix A will include the error vector:

$$\hat{A} = \exp \{ - [\delta\alpha \times] \} A_{true} \approx (I - [\delta\alpha \times]) A_{true}$$

Light reflection modelling

$$F_{sun(i)} = C_{sun,vis} \rho_{total(i)} \left(\mathbf{u}_{sun}^I \cdot \mathbf{u}_{n(i)}^I \right)$$

$$\rho_{total(i)} = \rho_{spec(i)} + \rho_{diff(i)}$$

$$\rho_{spec(i)} = k_{1(i)} \frac{\rho_{spec_{num}(i)}}{\rho_{spec_{den}(i)}} F_{reflect(i)}$$

$$\rho_{diff(i)} = k_{2(i)} \left[1 - \left(1 - \frac{\mathbf{u}_{obs}^I \cdot \mathbf{u}_{n(i)}^I}{2} \right)^5 \right] \left[1 - \left(1 - \frac{\mathbf{u}_{sun}^I \cdot \mathbf{u}_{n(i)}^I}{2} \right)^5 \right]$$

Vector system of facet i [3]

2.4 Extraction Methods [6]

1. Fast Fourier Transform → Commonly used for space debris observation - baseline
Requires equally spaced data points – difficult in practice
2. Epoch folding method
3. Lomb-Scargle periodogram
4. Phase reconstruction

Measured light curve of PAKSAT (07.11.2014)

Reconstructed phase with 581s period.

Box-wing satellite - GLONASS

2.5 Conclusions

Challenges

- **Limited Resolution:** Detecting and tracking small debris (<10 cm) in LEO [7]
- **Short Observation Windows:** limited data collection due to brief observation periods [8];
- **Weather & Atmospheric Conditions:** Ground-based telescopes are affected by weather, limiting observation times;
- **Ambiguity:** Light curves from different objects can sometimes look very similar, making it hard to identify specific debris;
- **Tumbling Complications:** Objects that are tumbling rapidly create complex light curves that are harder to interpret [5].

Future trends

- **Machine learning approaches:** automated light curve analysis, object classification [9];
- **Multi-site stereoscopic observations:** improved 3D reconstruction [10];
- **Integration of spectral data with light curves:** enhanced material characterization [11];
- **Improved models:** non-rigid body dynamics for tumbling objects [12].

4.1 Calibration - Polar alignment

- Equatorial mount (2 movable axes):
 - Axis of right ascension
 - Axis of declination

- Alignment of right ascension parallel to earth rotation axis

- To follow movement of sky continuously

<https://optcorp.com/blogs/deep-sky-imaging/polar-alignment-on-your-mount>

4.1 Calibration - Polar alignment

Methods:

- Rough alignment to Polaris with eyepiece of telescope
- Polar scope
- Drift alignment
- All-star alignment
 - One star align method
 - Two star align method

<https://britastro.org/2021/using-a-polarscope>

<https://astrocamera.net/equipmnt/p-align/driftaz.htm>

4.2 Calibration - Focusing

- The bigger the zoom the more difficult
- Not stable → atmosphere (flickering, temperature changes)
= Putting the sensor into the focus plane of the telescope where all the beams of a star converge and the maximal amount of light is concentrated into the smallest possible area

Methods:

- Primal mirror focusing (rough way)
- Fine focussing, manual
- Fine focussing, motorized
- Masks:
 - Bahtinov mask
 - Scheiner mask

4.2 Calibration - Focusing

- Primal mirror focusing (Schmidt-Cassegrain-Telescope)

<https://abenteuer-astronomie.de/was-ist-eigentlich-ein-schmidt-cassegrain-teleskop/>

4.2 Calibration - Focusing

- Bahtinov mask:

<https://www.gerdneumann.net/deutsch/astrofotografie-parts-astrophotography/bahtinov-masks-bahtinov-masken.html>

<https://www.gerdneumann.net/deutsch/astrofotografie-parts-astrophotography/bahtinov-masks-bahtinov-masken.html>

4.3 Calibration - Bias, Dark, Flat frames

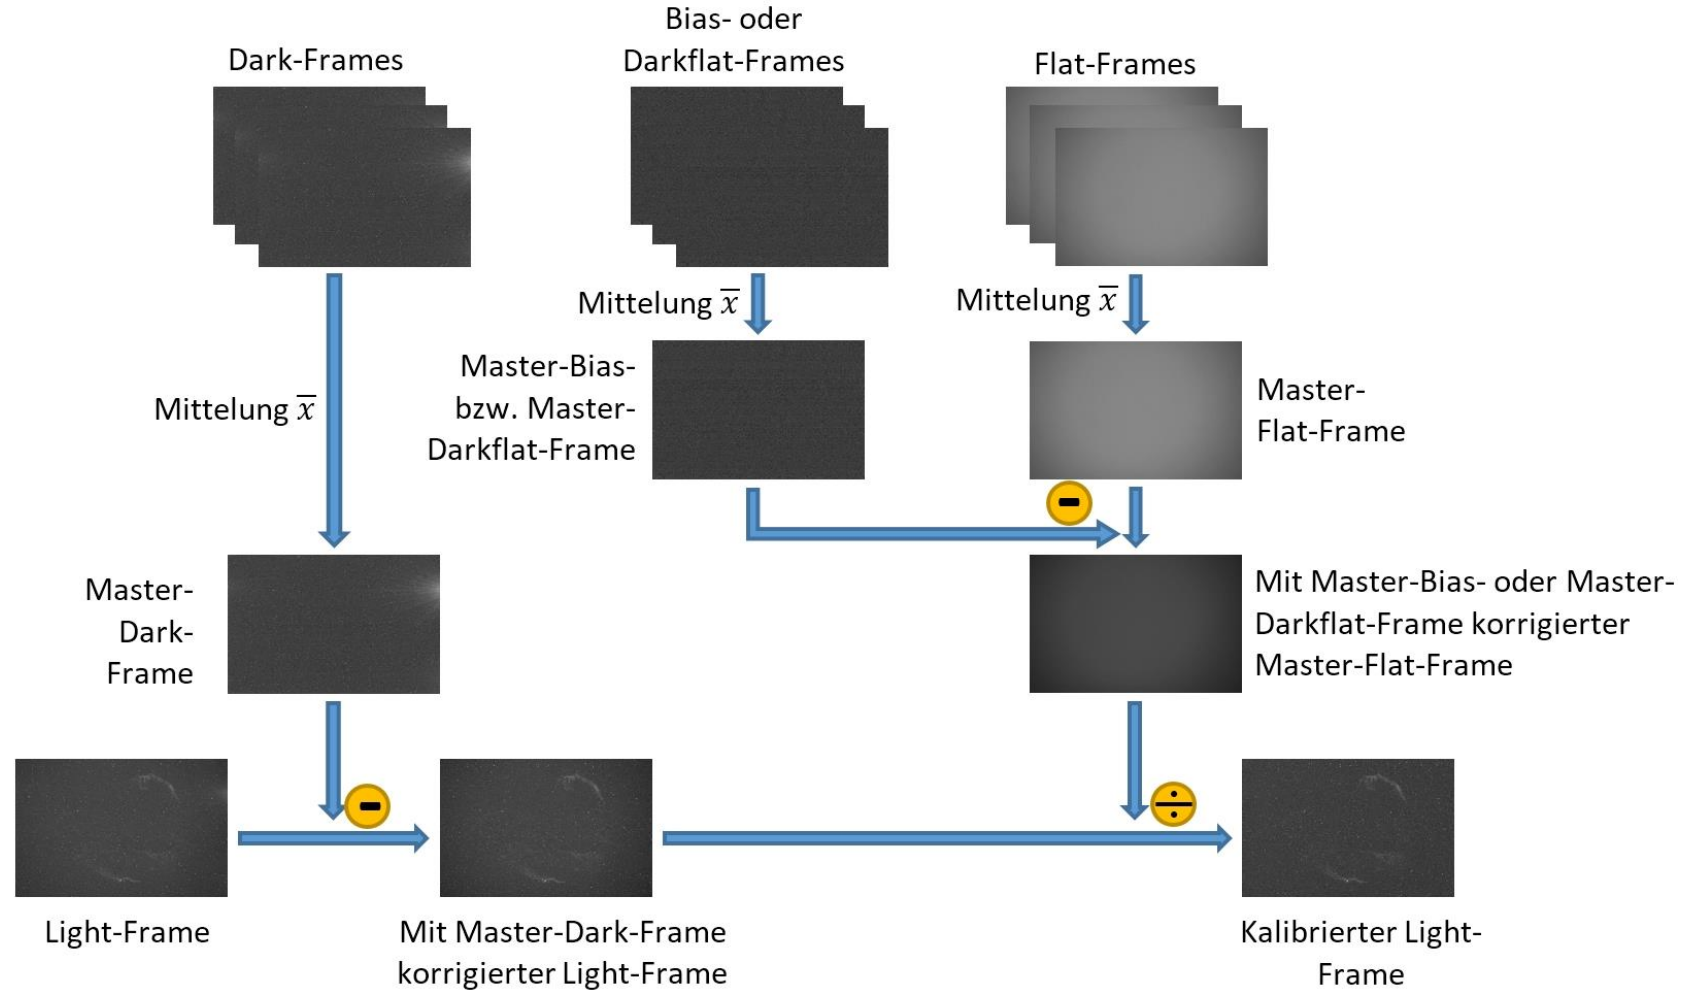

Image Calibration (Bias, Dark, Flat frames)

→ To correct image errors and noise (Remove artifacts and interference)

- **Bias** frame: with shortest exposure time and closed shutter
 - contain offset and camera noise
- **Dark** frame: with closed shutter, same exposure time & temperature
 - to remove dark current, sensor glowing, hot-pixel & dead-pixel
- **Flat** frame: with same position, similar focal point & further settings
 - to correct vignetting and irregular illumination
- **Darkflat** frame: with closed shutter, same exposure time as flat frames
 - to remove offset and dark current

4.3 Calibration - Bias, Dark, Flat frames

Schema:

<https://astrobasics.de/grundlagen/bias-flats-darks-darkflats/>

Name	Description	Launched	Action
SPACE STATION	The International Space Station (ISS) is a joint project of five space agencies: the National Aeronautics and Space Administration (United States), the Russian Federal Space Agency (Russian Federation), the Japan Aerospace Exploration Agency (Japan), the Canadian Space Agency (Canada) and the European Space Agency (Europe).	November 20, 1998	TRACK IT
SES 1	SES 1 is a communications satellite designed to replace two aging spacecraft serving North America.	April 24, 2010	TRACK IT
NOAA 19	NOAA 19 is the fifth in a series of five Polar-orbiting Operational Environmental Satellites (POES) with advanced microwave sounding instruments that provide imaging and sounding capabilities.	February 6, 2009	TRACK IT
GOES 13	GOES 13 is an American (NOAA) geostationary weather satellite that was launched by a Delta 4 rocket from Cape Canaveral at 22:11 UT on 24 May 2006.	May 24, 2006	TRACK IT
NOAA 15	NOAA 15 (designated NOAA-K before launch) is one of the NASA-provided TIROS series of weather forecasting satellite run by NOAA.	May 13, 1998	TRACK IT
NOAA 18	NOAA 18, known before launch as NOAA-N, is a weather forecasting satellite run by NOAA.	May 20, 2005	TRACK IT
TERRA	TERRA (EOS AM-1) is a multi-national NASA scientific research satellite in a Sun-synchronous orbit around the Earth.	December 18, 1999	TRACK IT
AQUA	AQUA (EOS-PM1) is an afternoon equator-crossing platform which includes a suite of sensors designed to study the diurnal properties of cloud and aerosol radiative fluxes, cloud formation, and precipitation (MIMR, AIRS/AMSU-AMHS, and MODIS-N) in conjunction with a wind scatterometer planned for the Japanese ADEOS-II spacecraft.	May 4, 2002	TRACK IT
METOP-B	METOP-B is a 9,005-pound (4,085-kg) spacecraft outfitted with eight instruments to survey clouds, winds, moisture, greenhouse gases, and other atmospheric conditions for at least five years.	September 17, 2012	TRACK IT
SUOMI NPP	SUOMI NPP, previously known as the National Polar-orbiting Operational Environmental Satellite System Preparatory Project (NPP) and NPP-Bridge, is a weather satellite operated by the NOAA.	October 28, 2011	TRACK IT
GOES 15	GOES 15 (GOES-P) is an American weather satellite, which will form part of the Geostationary Operational Environmental Satellite (GOES) system operated by the US National Oceanic and Atmospheric Administration.	March 4, 2010	TRACK IT
FOX-1A (AO-85)	FOX-1A is a small 1-Unit CubeSat developed by AMSAT.	October 8, 2015	TRACK IT
SAUDISAT 1C	SAUDISAT 1C (or SO-50, Saudi-OSCAR 50) carries several experiments, including a mode J FM amateur repeater experiment operating on 145.	December 20, 2002	TRACK IT

Track NOAA 16 DEB now!
10-day predictions

NORAD ID: 42418
Int'l Code: 2000-055TN
Perigee: 808.6 km
Apogee: 828.3 km
Inclination: 98.7°
Period: 101.1 minutes
Semi major axis: 7189 km
RCS: Unknown
Launch date: September 21, 2000
Source: United States (US)
Launch site: AIR FORCE WESTERN TEST RANGE (AFWTR)

Note: This is SATELLITE DEBRIS

2 42418 98.7079 355.1191 0013571 158.0412 202.1351 14.24396988443957
```

Line number	1
Satellite catalog number	42418
Classification	U
International Designator (launch number of the year)	00
International Designator (last two digits of launch year)	055
International Designator (piece of the launch)	TN
Epoch year (last two digits of year)	24
Epoch (day of the year and fractional portion of the day)	280.16314470
First derivative of mean motion; the ballistic coefficient	.00016147
Second derivative of mean motion (decimal point assumed)	00000-0
B*, the drag term, or radiation pressure coefficient (decimal point assumed)	70092-2
Ephemeris type (always zero; only used in undistributed TLE data)	0
Element set number. Incremented when a new TLE is generated for this object.	999
Checksum (modulo 10)	0

5.2 Measurements - TLEs

Two Line Element Set (TLE):

```
1 42418U 00055TN 24284.94026301 .00061226 00000-0 26231-1 0 9996
2 42418 98.7079 355.1191 0013658 170.1108 202.1351 14.24396988443957
```

Line number	2
Satellite catalog number	42418
Inclination (degrees)	98.7060
Right ascension of the ascending node (degrees)	350.3848
Eccentricity (decimal point assumed)	0013658
Argument of perigee (degrees)	170.1108
Mean anomaly (degrees)	190.0342
Mean motion (revolutions per day)	14.24156525443277

5.3 Measurements – other tracked objects

Lageos

- Exposure time of 0.2s
- Did not work: not visible in finder scope

5.3 Measurements – other tracked objects

Satellite TERRA

- Exposure time of 0.02s
- Did not work: some images, but then hardware failure of the motor

5.3 Measurements – other tracked objects

METEOR 2-17 DEB

- Exposure time: 0.2 s
- Did not work: not visible in finder scope

5.3 Measurements – other tracked objects

CZ-2 DEB

- Exposure time: 0.2 s
- Did not work: not visible in finder scope

5.3 Measurements – other tracked objects

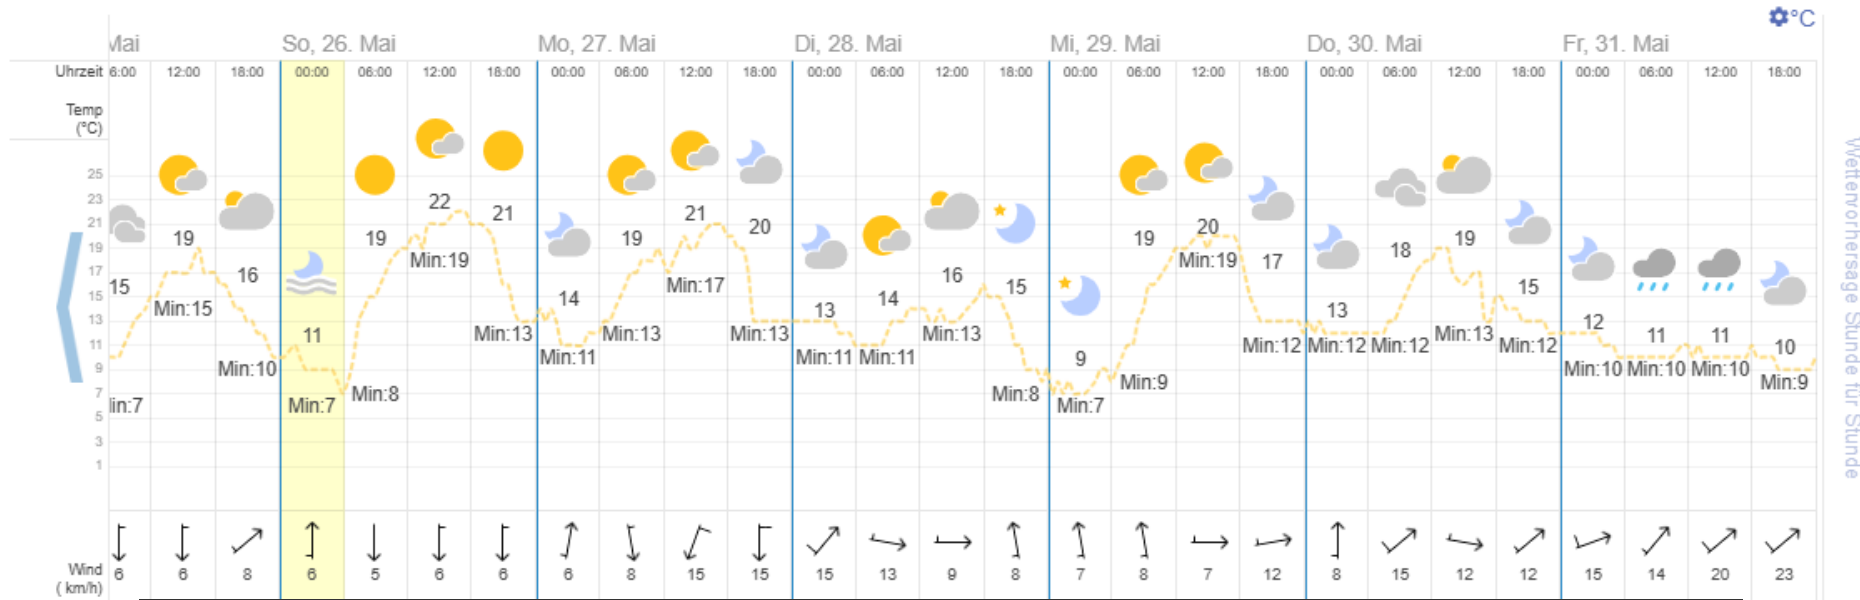

SL-8 R/B

- Rocket Body
- Exposure time: 0.05 s
- Did not work: not visible in finder scope

5.4 Cloudy summer

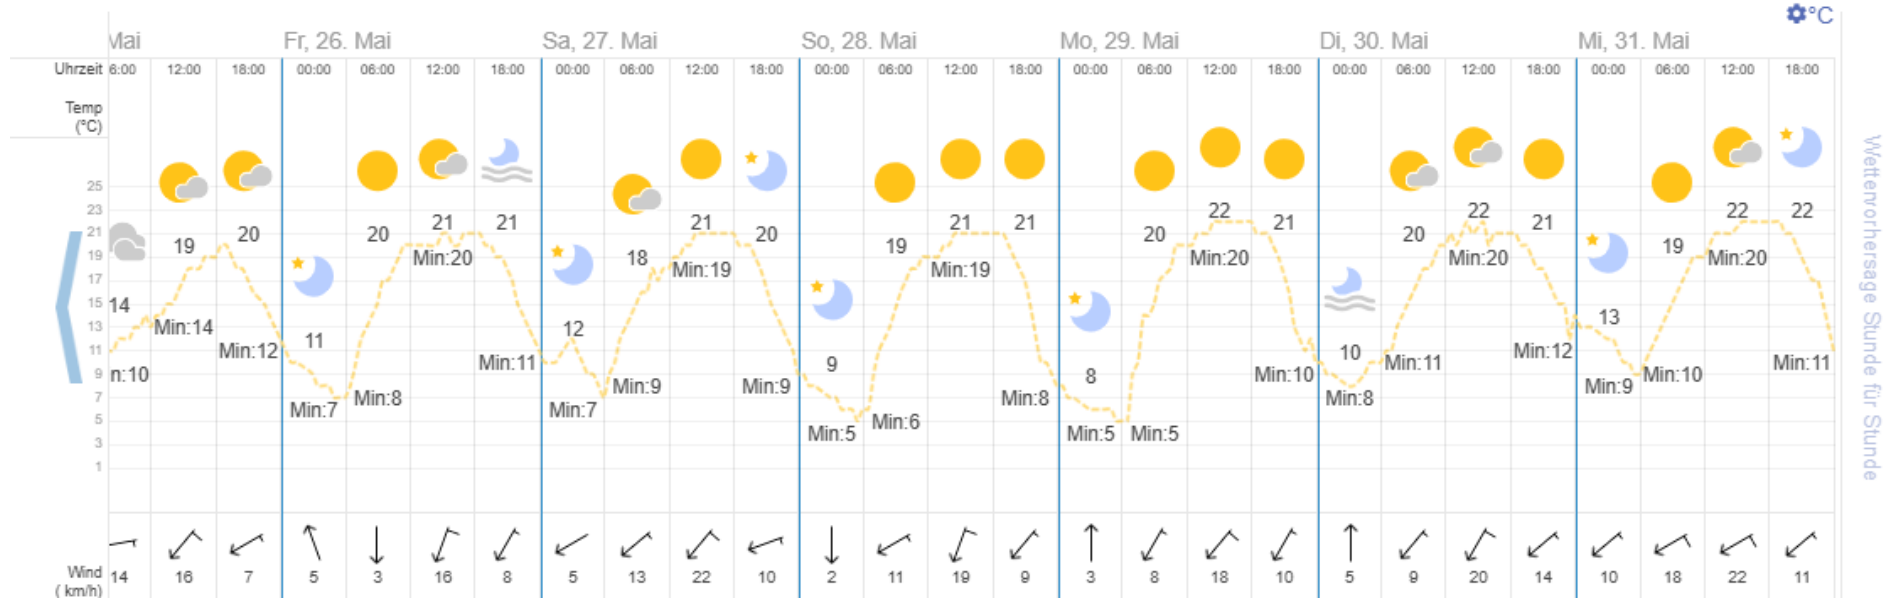

Wetter im Mai 2024 in München — Graph

Uhrzeit	Wetterbedingungen		Bioklima			
	Temp	Wetter	Wind	Luftfeuchte	Barometer	Sicht
20:20	15 °C	Vorüberziehende Wolken.	13 km/h ↗	94%	1016 hPa	k.A.
20:50	15 °C	Meist bewölkt.	13 km/h →	94%	1016 hPa	k.A.
21:20	15 °C	Meist bewölkt.	9 km/h ↗	94%	1016 hPa	k.A.
21:50	15 °C	Meist bewölkt.	7 km/h ↗	94%	1016 hPa	k.A.
22:50	15 °C	Meist bewölkt.	9 km/h ↘	94%	1017 hPa	k.A.
23:20	14 °C	Bedeckt.	9 km/h →	94%	1017 hPa	k.A.
23:50	14 °C	Meist bewölkt.	9 km/h →	94%	1017 hPa	k.A.

5.4 Cloudy summer

Wetter im Mai 2023 in München — Graph

Uhrzeit	Wetterbedingungen		Bioklima			
	Temp	Wetter	Wind	Luftfeuchte	Barometer	Sicht
20:20	18 °C	Sonnig.	11 km/h	40%	1017 hPa	k.A.
20:50	17 °C	Sonnig.	7 km/h	42%	1017 hPa	k.A.
21:20	15 °C	Heiter.	6 km/h	51%	1017 hPa	k.A.
22:20	10 °C	Heiter.	4 km/h	76%	1017 hPa	k.A.
22:50	10 °C	Heiter.	6 km/h	76%	1018 hPa	k.A.
23:20	9 °C	Heiter.	6 km/h	82%	1017 hPa	k.A.
23:50	8 °C	Heiter.	4 km/h	87%	1017 hPa	k.A.

5.5 Problems and challenges

- Very cloudy and rainy weather this summer
- Hardware failure of motor
- Very often: debris was not visible in finder scope → measurement did not work
- Problems during the session probably related to tracking problem of kstars because alignment was good enough (saturn was in field of view)

5.6 Measurements – Fun Observations

Moon, Saturn, Galaxies, Polar Lights!
